BULK BAGGER H1000 SERIES

The H1000 Series Bulk Bagger is designed to charge both bulk bags and tote boxes. A scale has been incorporated for specific weight requirements.

- ✓ 2 Position Gate for Bulk/ Dribble
- ✓ Net Weigh or Load Cell
- ✓ Bag Inflator Neck Seal
- ✓ Manual Start
- ✓ Dust Collection Port
- ✓ Adjustable Bag Strap Hangers
- ✓ Optional Pneumatic Strap Hanger Release
- ✓ Electrical System
- ✓ 10 CFM @ 80 PSI Pneumatic Controls
- ✓ Steel Construction

BULK BAGS

The operator hangs the empty bag. The bag is secured by the inflatable neck seal, which also prevents dust escape. Upon operator command, the bag inflates and begins to fill. Once the appropriate weight is reached, the bag and pallet can be raised by forklift, straps removed from hooks and ready for removal from bagger.

TOTE BOXES

An empty box is placed under the fill spout and will be filled with product until the desired weight is reached. Our bulk bagger has incorporated dust collection, if needed. Once filled, the box is ready to be removed by forklift.
